Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2023.

Rule 13q-1 under the Securities Exchange Act (17 CFR 240.13q-1) for the fiscal year ended _____.

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

For calendar year 2023, Mercury Systems, Inc. (“we,” “us,” or “our”) conducted a reasonable country of origin inquiry and supply chain due diligence to determine whether our products contained any conflict minerals that originated from the Democratic Republic of the Congo or an adjoining country. A summary of our reasonable country of origin inquiry and due diligence is contained in our conflict minerals report filed as exhibit 1.01 to this report and is incorporated herein by reference.

In accordance with Rule 13p-1 under the Securities Exchange Act of 1934, as amended, we have filed this Specialized Disclosure Report on Form SD, and the conflict minerals report exhibit hereto, with the U.S. Securities and Exchange Commission and have posted such report on our website at <https://www.mrcy.com/company/environmental-social-and-governance/responsible-sourcing> under the heading of Conflict Minerals. Information contained on our website does not constitute part of this report.

Forward-Looking Statements

This report contains forward-looking statements within the meaning of the federal securities laws. Any statements that do not relate to historical or current facts or matters are forward-looking statements. You can identify some of the forward-looking statements by the use of forward-looking words, such as “believe,” “intend,” “expect,” “will” or the use of future tense. Statements concerning current conditions may also be forward-looking if they imply a continuation of current conditions. Forward-looking statements are subject to risks and uncertainties that could cause actual actions or performance to differ materially from those expressed in the forward-looking statements. These risks and uncertainties include but are not limited to: the risk that information reported to us by our direct or indirect suppliers from which we procure finished goods, components, and/or materials for our products, or industry information used by us, may be inaccurate; the risk that smelters or refiners may not participate in the Responsible Minerals Assurance Process, which is a voluntary initiative in which independent third parties audit processing facilities’ procurement and processing activities and determine if the processing facilities maintain sufficient documentation to reasonably demonstrate conflict-free sourcing; the continued implementation of satisfactory traceability and other compliance measures by our direct and indirect suppliers, on a timely basis or at all; whether market participants responsibly source conflict minerals; and changes in the conflict minerals regulations and other political and regulatory developments, whether in the Democratic Republic of the Congo and its adjoining countries, the United States, or elsewhere. You are cautioned not to place undue reliance on these forward-looking statements, which apply only as of the date of filing of this report. We do not intend, and undertake no obligation, to publish revised forward-looking statements to reflect events or circumstances after the date of filing of this report or to reflect the occurrence of unanticipated events. These risks and uncertainties also include such additional risk factors as are discussed in our filings with the U.S. Securities and Exchange Commission, including our Annual Report on Form 10-K for the fiscal year ended June 30, 2023, and subsequent Quarterly Reports on Form 10-Q and Current Reports on Form 8-K.

Item 1.02 Exhibit

A conflict minerals report covering calendar year 2023 has been filed as exhibit 1.01 to this Form SD.

Section 2 – Resource Extraction Issuer Disclosure

Item 2.01 Resource Extraction Issuer Disclosure and Report

Not applicable.

Section 3 – Exhibits

Item 3.01 Exhibits

Exhibit 1.01 – Mercury Systems, Inc. Conflict Minerals Report for the Year Ended December 31, 2023

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.
Dated: May 30, 2024

MERCURY SYSTEMS, INC.

Executive Vice President, Chief Legal Officer, and Corporate
Secretary

Mercury Systems, Inc.
Conflict Minerals Report
For the Year Ended December 31, 2023

This conflict minerals report for the year ended December 31, 2023, is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934, as amended. This report has been prepared based on Rule 13p-1 as further clarified by the Securities and Exchange Commission (“SEC”) guidance issued on April 7, 2017, in its Updated Statement on the Effect of the Court of Appeals Decision on the Conflict Minerals Rule. References in this report to “DRC” are to the Democratic Republic of the Congo and its nine adjoining countries (Angola, Burundi, Central African Republic, Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia). References in this report to “conflict minerals” are to cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which based on regulations from the SEC are limited to tin, tantalum, tungsten, and gold (“3TG”).

Our Products

Mercury Systems, Inc. (collectively with its subsidiaries, “we,” “us,” or “our”) is a technology company that delivers mission-critical processing power to the edge, making advanced technologies profoundly more accessible for today’s most challenging aerospace and defense missions. The Mercury Processing Platform allows customers to tap into innovative capabilities from silicon to system scale, turning data into decisions on timelines that matter. Headquartered in Andover, Massachusetts, our products and solutions are deployed in more than 300 programs and across 35 countries, enabling a broad range of applications in mission computing, sensor processing, command and control, and communications. Processing technologies that comprise our platform include signal solutions, display, software applications, networking, storage, and secure processing. Our innovative solutions are mission-ready, trusted and secure, software-defined and open and modular (our differentiators), to meet customers’ most-pressing high-tech needs, including those specific to the defense community.

During calendar year 2023, we manufactured and sold products as well as provided software and services. Manufacturing operations include manufacturing at our own facilities and by contract manufacturers using our design specifications. We provide products in the fields of radio frequency, analog-to-digital and digital to analog conversion, advanced multi- and many-core sensor processing systems, embedded security, digital storage, and digital radio frequency memory solutions, software defined communications capabilities, and advanced security technologies and capabilities. Examples of our products include: power amplifiers and limiters; switches; oscillators; filters; equalizers; digital and analog converters; chips; MMICs (monolithic microwave integrated circuits); memory and storage devices; embedded processing modules; embedded processing boards; switch fabric boards; high speed input/output boards; digital receiver boards; graphics and video processing and Ethernet and IO (input-output) boards; multi-chip modules; integrated radio frequency and microwave multi-function assemblies; tuners; transceivers; rack-mount servers; display head assemblies; and integrated subsystems that include multiple modules and/or subassemblies. 3TG are essential to the functionality of most electronic devices and their use is extensive in the electronics industry. Examples of the use of 3TG in electronics include tin solder for joining circuits; tantalum in capacitors; tungsten in metal wires, electrodes, and electrical contacts; and gold in electric plating and circuit boards.

We performed a review of our products considering the SEC’s conflict minerals regulations and the vendors supplying the components and materials incorporated into our products. Components and connectors incorporated into our products could contain conflict minerals as defined by the SEC, regardless of the country of origin of those minerals.

Our Calendar Year 2023 Reasonable Country of Origin Inquiry and Supply Chain Due Diligence

We do not engage in the extraction, transportation, handling, trading, processing, smelting, refining, or alloying of 3TG and we do not acquire 3TG directly from any mine, smelter, or refiner, regardless of country of origin. We believe that we are many layers removed in the supply chain from the extraction and smelting of 3TG. To the extent that 3TG may be incorporated into our products, they are acquired through our supply chain in the form of components, connectors, solder, and other materials that we or our contract manufacturers incorporate into our finished products. We designed our conflict minerals reasonable country of origin inquiry and supply chain due diligence around our product manufacturing supply chain. We defined the scope of our conflict minerals inquiry by identifying and contacting the suppliers on our approved vendor list that provide components or other materials that may contain 3TG. We rely upon our suppliers to provide information on the origin of the 3TG contained in materials supplied to us, including sources of 3TG that are supplied to them from sub-tier suppliers. We expect our suppliers to provide us with sourcing information per our conflict minerals policy.

In general, we encountered the following challenges in obtaining responses from our suppliers:

- we are dependent on information received from our direct suppliers to conduct our reasonable country of origin inquiry process; and
- we have a varied supplier base with differing levels of resources and sophistication, and many of our suppliers are not themselves subject to Rule 13p-1 of the Securities Exchange Act of 1934, as amended.

Our Approved Vendor List

Our supply chain approved vendor list (“AVL”) contained 819 tier 1 suppliers identified as in-scope for conflict mineral regulatory purposes and which were contacted as part of our reasonable country of origin inquiry. In many cases, for a given component in one of our products, we have multiple vendors as a source for that component and each of those vendors is listed on our AVL. Our procedures for adding a vendor to our AVL include a review of the vendor’s conflict minerals reporting as part of the approval process.

Our Conflict Minerals Policy Statement and Supplier Outreach

Our conflict minerals policy statement is posted on our corporate website, www.mrcy.com, under the heading “Company,” then “Environmental, Social and Governance,” and then “Responsible Sourcing.” Our conflict minerals due diligence process included the development of a conflict minerals policy, establishment of a cross-functional team, engagement of a third-party vendor to conduct supply chain due diligence, communication with suppliers, gathering compliance data, and measuring and internally reporting our due diligence progress. We distributed supplier notices summarizing our conflict minerals policy to the suppliers on our AVL. For our calendar year 2023 Reasonable Country of Origin Inquiry (“RCOI”), we engaged Source Intelligence to enhance our conflict minerals compliance program.

The suppliers on our AVL were included in the RCOI performed by Source Intelligence. Prior to being asked to provide conflict minerals data, suppliers were asked a series of questions to determine whether the products they supply to us contain 3TG which is necessary to the functionality or production of our products. This information was used to determine which suppliers were in scope for regulatory purposes and thus asked to provide additional conflict minerals information.

We engaged with Source Intelligence to develop a list of suppliers determined to be in-scope for regulatory purposes based on our influence over the manufacturing process (i.e., meeting the manufacture or contract to manufacture definitions in SEC Rule 13p-1) and potential use of 3TG. Source Intelligence contacted our suppliers to collect information about the presence and sourcing of the 3TG used in the products and components supplied to us. This program utilized the Conflict-Free Sourcing Initiative’s Conflict Minerals Reporting Template (“CMRT”). Suppliers were offered two options to submit the

required information, either by uploading the CMRT in Excel format or by completing an online survey version of this template directly in the Source Intelligence platform.

Source Intelligence sent an email to suppliers containing a registration and survey request link for the on-line data collection platform. Following the initial introductions to the program and information request, one email reminder was sent to each non-responsive supplier requesting survey completion. In recognition that the information requested can take time to collect and aggregate, suppliers were given a final deadline of March 31, 2024, to provide information about the metal processors present in their supply chains for the calendar 2023 reporting year. Suppliers were asked to provide information regarding the sourcing of their materials with the goal of identifying the 3TG smelters or refiners and associated mine countries of origin. Suppliers who had already performed a RCOI using the CMRT were asked to upload this document into the Source Intelligence system or to provide this information in the online survey version. We chose to give our suppliers the ability to share information at a level with which they were most comfortable, i.e. company, product or user-defined, but the declaration scope had to be specified. Suppliers were requested to provide an electronic signature before submitting their data to verify that all answers submitted were accurate to the best of the supplier's knowledge, but the suppliers were not required to provide an electronic signature to submit their data. Source Intelligence evaluated the supplier responses for plausibility, consistency, and gaps. If any of the following quality control flags were raised, suppliers were automatically contacted by Source Intelligence on a bi-weekly basis up to three times:

- one or more smelters or refiners were listed for an unused metal;
- smelter or refiner information was not provided for a used metal, or such information provided was not a verified metal processor;
- the supplier answered yes to sourcing from the Democratic Republic of the Congo or adjoining countries, but none of the smelters or refiners listed are known to source from the region;
- the supplier indicated that they have not received conflict minerals data for each metal from all relevant suppliers;
- the supplier indicated they have not identified all of the smelters or refiners used for the products included in the declaration scope;
- the supplier indicated they have not provided all applicable smelter or refiner information received; and
- the supplier indicated 100% of the 3TG for products covered by the declaration originates from scrap/recycled sources, but one or more smelters or refiners listed are not known to be exclusive recyclers.

For supply chains with smelters or refiners that are known or thought to be sourcing from the Democratic Republic of the Congo or adjoining countries, additional investigation was conducted to determine the source and chain-of-custody of the regulated metals. Source Intelligence relies on the following internationally accepted audit standards to determine which smelters or refiners are considered "DRC Conflict Free": the Responsible Minerals Assurance Process ("RMAP"); the London Bullion Market Association Good Delivery Program ("LBMA"); and the Responsible Jewellery Council Chain-of-Custody Certification ("RJC"). Source Intelligence is an official vendor member of the Responsible Minerals Initiative ("RMI") to further facilitate the exchange of supply chain data and technical information in the quest for global ethical sourcing of materials.

If the smelter or refiner is not certified by these internationally recognized standards, Source Intelligence attempts to contact them to gain more information about their sourcing practices, including countries of origin and transfer, and whether there are any internal due diligence procedures in place or other processes they undertake to track the chain-of-custody on the source of their mineral ores. Relevant information reviewed includes whether the smelter or refiner has a documented, effective, and communicated conflict-free policy; an accounting system to support a mass balance of materials

processed; and traceability documentation. Source Intelligence also performs internet research to determine whether there are any outside sources of information regarding the smelter or refiners sourcing practices. Source Intelligence attempts up to three contacts to smelters or refiners to gather information on mine country of origin and sourcing practices.

A total of 819 tier 1 suppliers were identified as in-scope for conflict mineral regulatory purposes and contacted as part of the RCOI process. The response rate among these suppliers was 35%. Of these responding suppliers, 49% indicated one or more of the regulated metals (3TG) as necessary to the functionality or production of the products they supply to us. We did not conclude that any of our products were “DRC conflict free” per the meaning of that term in the conflict minerals regulations promulgated by the SEC.

Appendix A to this report contains each unique smelter-metal combination reported to be in our supply chain with additional information from the Source Intelligence smelter database, including metal, smelter name, smelter country, and conflict-free certifications.

Steps To Be Taken To Mitigate Risk Through Enhanced Due Diligence Efforts

We will continue to take the following steps to improve our due diligence conducted to further mitigate any risk that the necessary conflict minerals in our products could benefit armed groups in the DRC and its adjoining countries:

- continue to include a conflict minerals flow-down clause in new or renewed supplier contracts;
- continue robust engagement with suppliers and direct them to training resources designed to increase the response rate and improve the content and accuracy of the supplier survey responses; and
- further refine and improve best practices while continuing to build leverage over our supply chain in accordance with the OECD Guidance.

We have a means for the anonymous reporting of any concerns about compliance, legal, and ethical matters. Any employee, supplier, customer, shareholder, or other interested party can submit a concern regarding our conflict minerals process via the following anonymous methods:

- by telephone voicemail at 866-277-5739; or
- by submitting a complaint via the internet at www.whistleblowerservices.com/mrcy.

Independent Audit

Pursuant to SEC regulations, this report is not subject to an independent private sector audit.

Appendix A

Certification Status:

1. Responsible Minerals Assurance Process: Responsible Minerals Initiative (RMI)

- **RMAP:** The smelter has an active certification or is in the process of renewing their certification.
- **RMAP-Active:** The smelter is actively moving through the certification process.
- **TICMC-Progressing:** Tungsten smelters that have committed to obtain a RMAP certification within 2 years of membership with the Tungsten Industry-Conflict Minerals Committee (TI-CMC).

2. Responsible Gold Certificate: London Bullion Market Association (LBMA)

- **LBMA:** The smelter has obtained a Responsible Gold Certification.

3. Chain of Custody Certificate: Responsible Jewellery Council (RJC)

- **RJC:** The smelter has obtained a Chain-of-Custody Certification.

The smelters listed in the table were identified by the suppliers as being part of our calendar year 2023 supply chain. Some of the suppliers may have reported to us smelters that were not in our supply chain (i) since they reported at a “company level,” meaning that they reported to us the 3TG contained in all of their products, not just the products that they sold to us, or (ii) due to over-inclusiveness in the information received from their suppliers. In addition, the smelters reflected below may not be all of the smelters in our 2023 supply chain, since many of the suppliers were unable to identify all of the smelters used to process the necessary 3TG content contained in our products and because not all of the suppliers responded to our inquiries.
